Added value in the representation of mean and extreme precipitation in the CCLM EURO-CORDEX 0.11 simulation

A. F. Prein, A. Gobiet, H. Truhetz, K. Keuler, K. G6rgen, C. Teichmann, C. Fox Maule, E. Van Meijgaard, M. Deque, N. Grigory, R. Vautard, E. Kjellstr6m, A. Colette

	Model	Institute
1	ARPEGE-CNRM	Meto-France
2	HIRHAM5	DMI
3	RACMO 22E	KNMI
4	RCA4	SMHI
5	REMO	CSC
6	WRF	CRP-GL
7	WRF	IPSL and INERIS
8	CCLM-CLMCOM	BTU

Simulation Period: 1989-2008 (ERA-Interim)

Region	Data-set
Sweden	PTHBV (Johansson 2002)
Germany	REGNIE (DWD 2009)
Alps	EURO4MAPGD (Isotta et al. 2013)
Spain	Spain011 (Herrera et al. 2012)
Norway	KLIMAGRID (Mohr 2009)

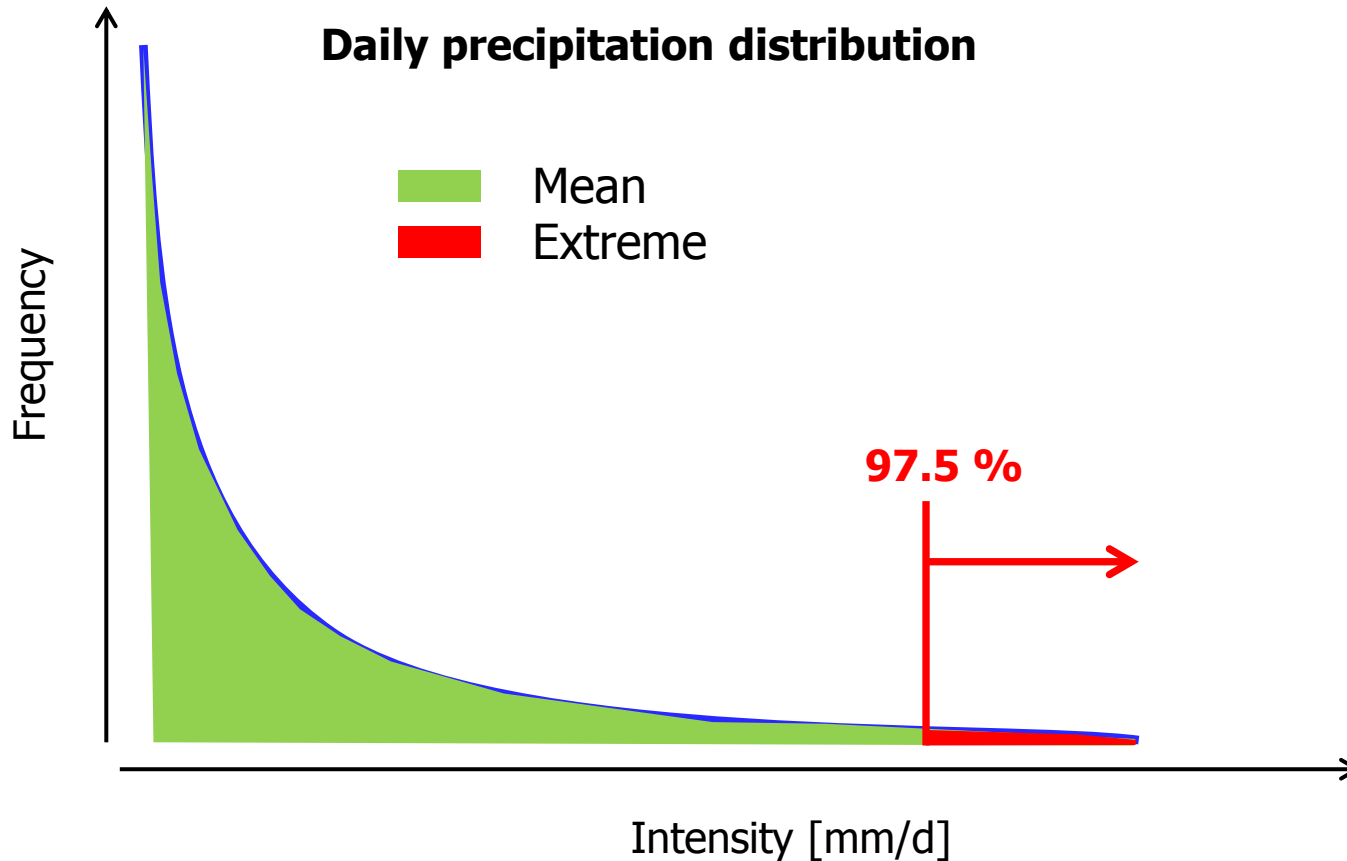

Common grid is 0.44

Biases and Error Variability: Extremes DJF Alps

Biases and Error Variability: Extremes DJF Alps

1

• Average Biases compared to other RCMs?

- CCLM has similar biases
- 0.11 does not decrease region average biases

2

• Added value on grid-point basis?

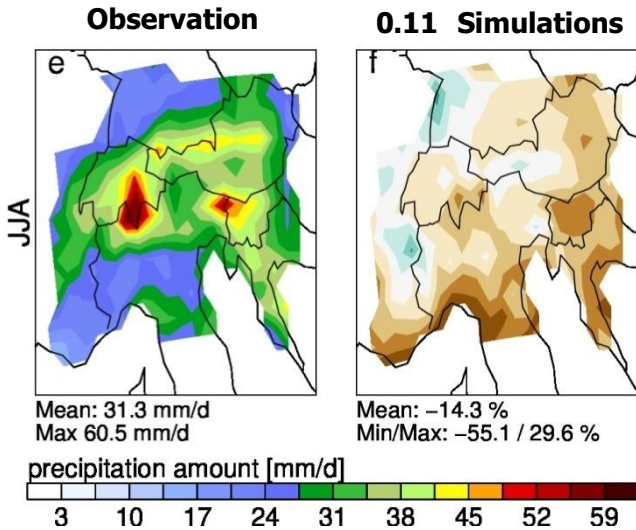

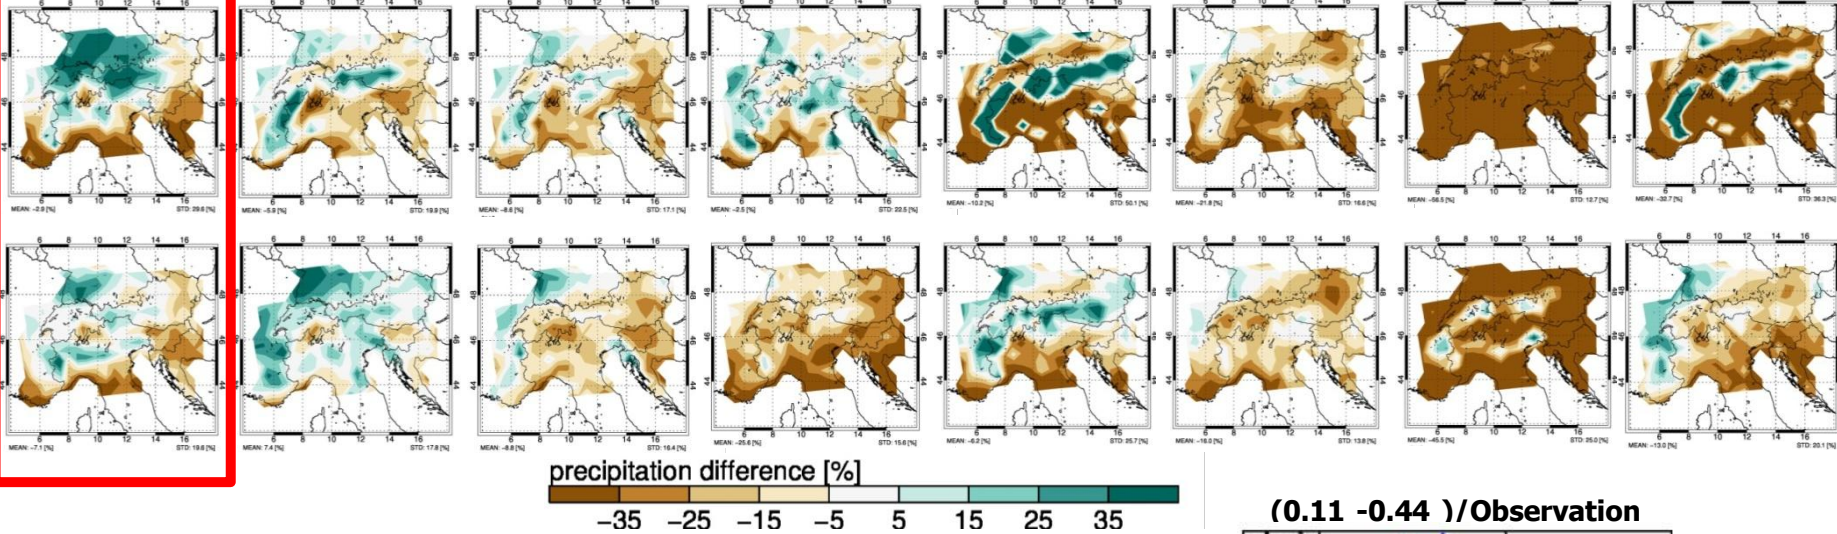

Seasonal Average Biases in Extreme Precip.

CCLM Net. Improved Areas

Net. Improved Areas

1

• Average biases compared to other RCMs?

- CCLM has similar biases
- 0.11 does not decrease region average biases

2

• Added value on grid-point basis?

- 0.11 does decrease biases on grid-points in mean and extreme precipitation
- CCLM: above average improvement in JJA; below in Scandinavia and Alps

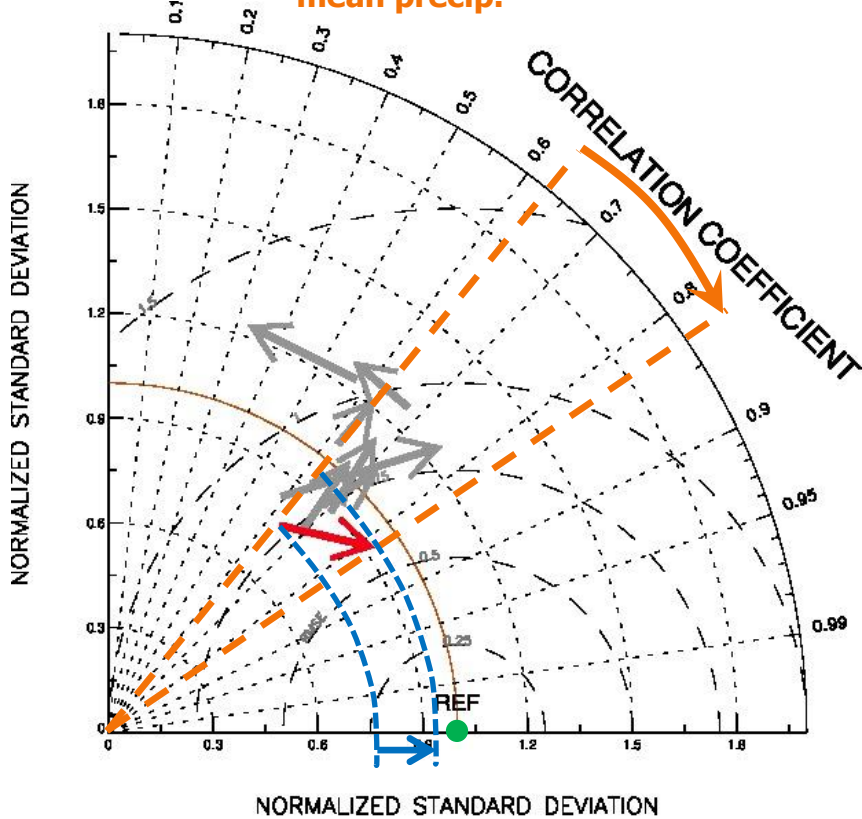

3

• Do spatial structures and variabilities get improved?

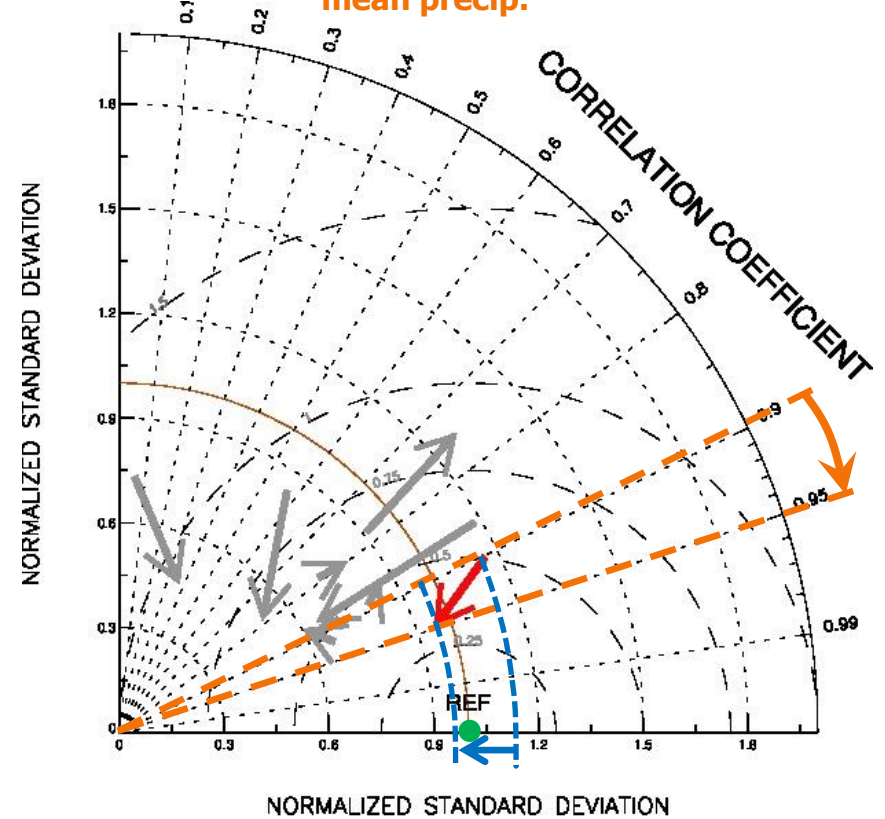

Taylor Diagram of Spatial average precip.

CCLM 0.44  CCLM 0.11

GER: DJF

Taylor Diagram of Spatial average precip.

CCLM 0.44 → CCLM 0.11

Alps: DJF
mean precip.

Alps: JJA
mean precip.

1

• Average biases compared to other RCMs?

- CCLM has similar biases
- 0.11 does not decrease region average biases

2

• Added value on grid-point basis?

- 0.11 does decrease biases on grid-points in mean and extreme precipitation
- CCLM: above average improvement in JJA; below in Scandinavia and Alps

3

• Do spatial structures and variabilities get improved?

- Partly smaller improvements than other RCMs (over average 0.44 performance)
- CCLM over average spatial correlation and variabilities of mean precipitation

A. F. Prein, A. Gobiet, H. Truhetz, K. Keuler, K. Görgen, C. Teichmann, C. Fox Maule, E. Van Meijgaard, M. Deque, N. Grigory, R. Vautard, E. Kjellström, A. Colette:

Precipitation in the EURO-CORDEX 0.11 and 0.44 simulations: High resolution, High benefits?

To be submitted to Climate Dynamics
