Outline

- **COSMO-DE-EPS - the operational state**
- **Improvements in COSMO-DE-EPS**
- **Results**

COSMO-DE-EPS - the operational state

- 2.8km horizontal resolution
- 50 vertical levels
- 20 members
- 27h forecast range
- 4 global models
- Fixed physic perturbations
- BC-EPS as boundary and initial perturbations
- Soil moisture perturbation

COSMO-DE-EPS concept

Motivation

- Increasing the spread of the ensemble and improving e.g. reliability and resolution as well
- Improving the IC by using an ensemble Kalman filter to generate perturbations based on statistically-dynamically sound methods
- ICON-EPS provides a sample of high-quality BCs based on one model and it is more feasible in operations than the multi-model BC-EPS

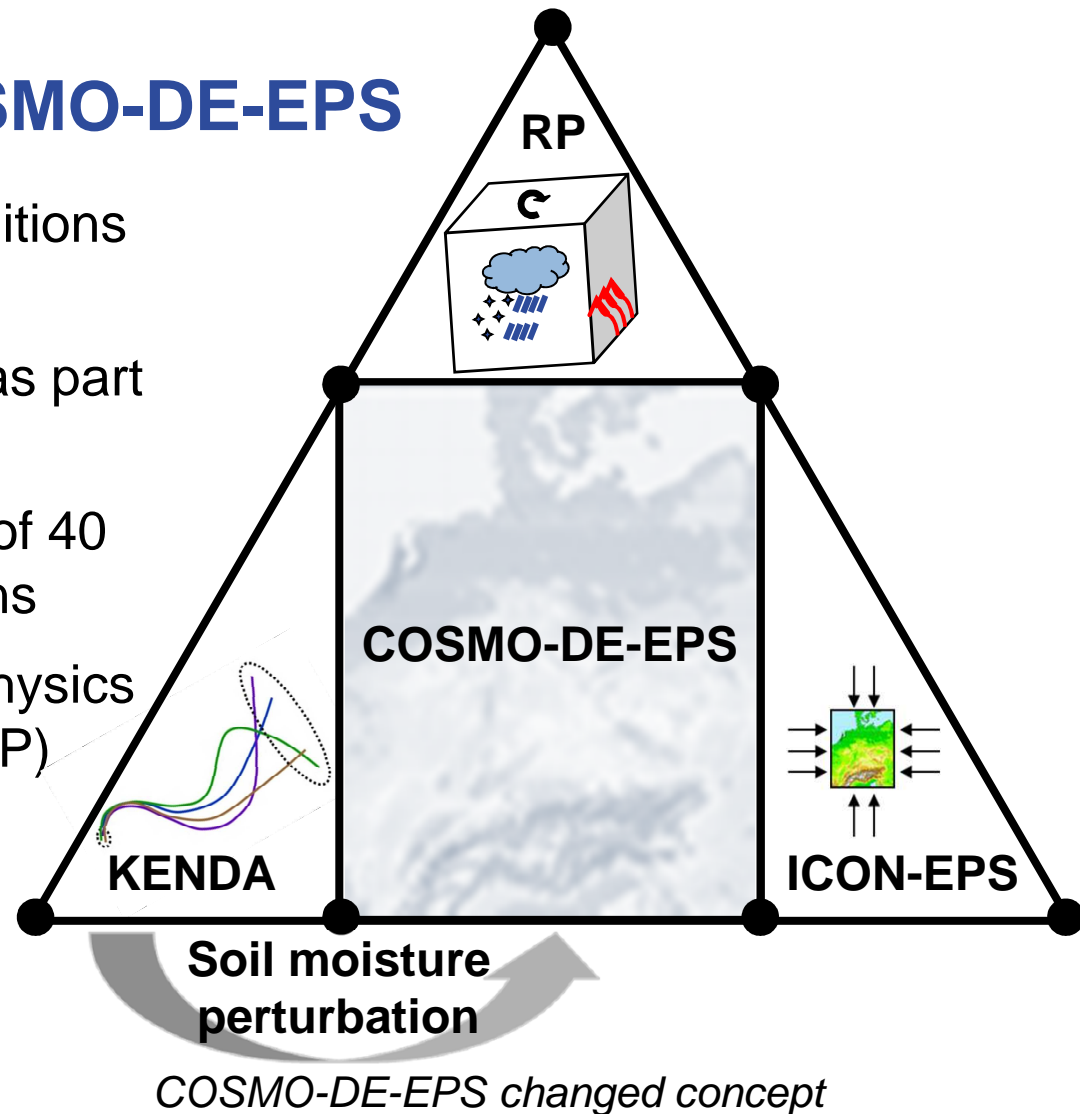

*T2M routine from 26.07.-25.08.2016
00 UTC run*

Improvements in COSMO-DE-EPS

- KENDA as EPS initial conditions 1-20 of 40 members
- Soil moisture perturbation as part of KENDA
- ICON-EPS members 1-20 of 40 used as boundary conditions
- Randomised selection of physics parameter perturbations (RP)

Improvements in COSMO-DE-EPS – the RP

- Randomised selection of the physics parameter perturbation for COSMO-DE-EPS
- The values of the parameters are not random (2-3 different values for each of the 12 parameters) [see table]
- Each parameter gets perturbed for 50% of the members of each ensemble run and stays fixed over the forecast range

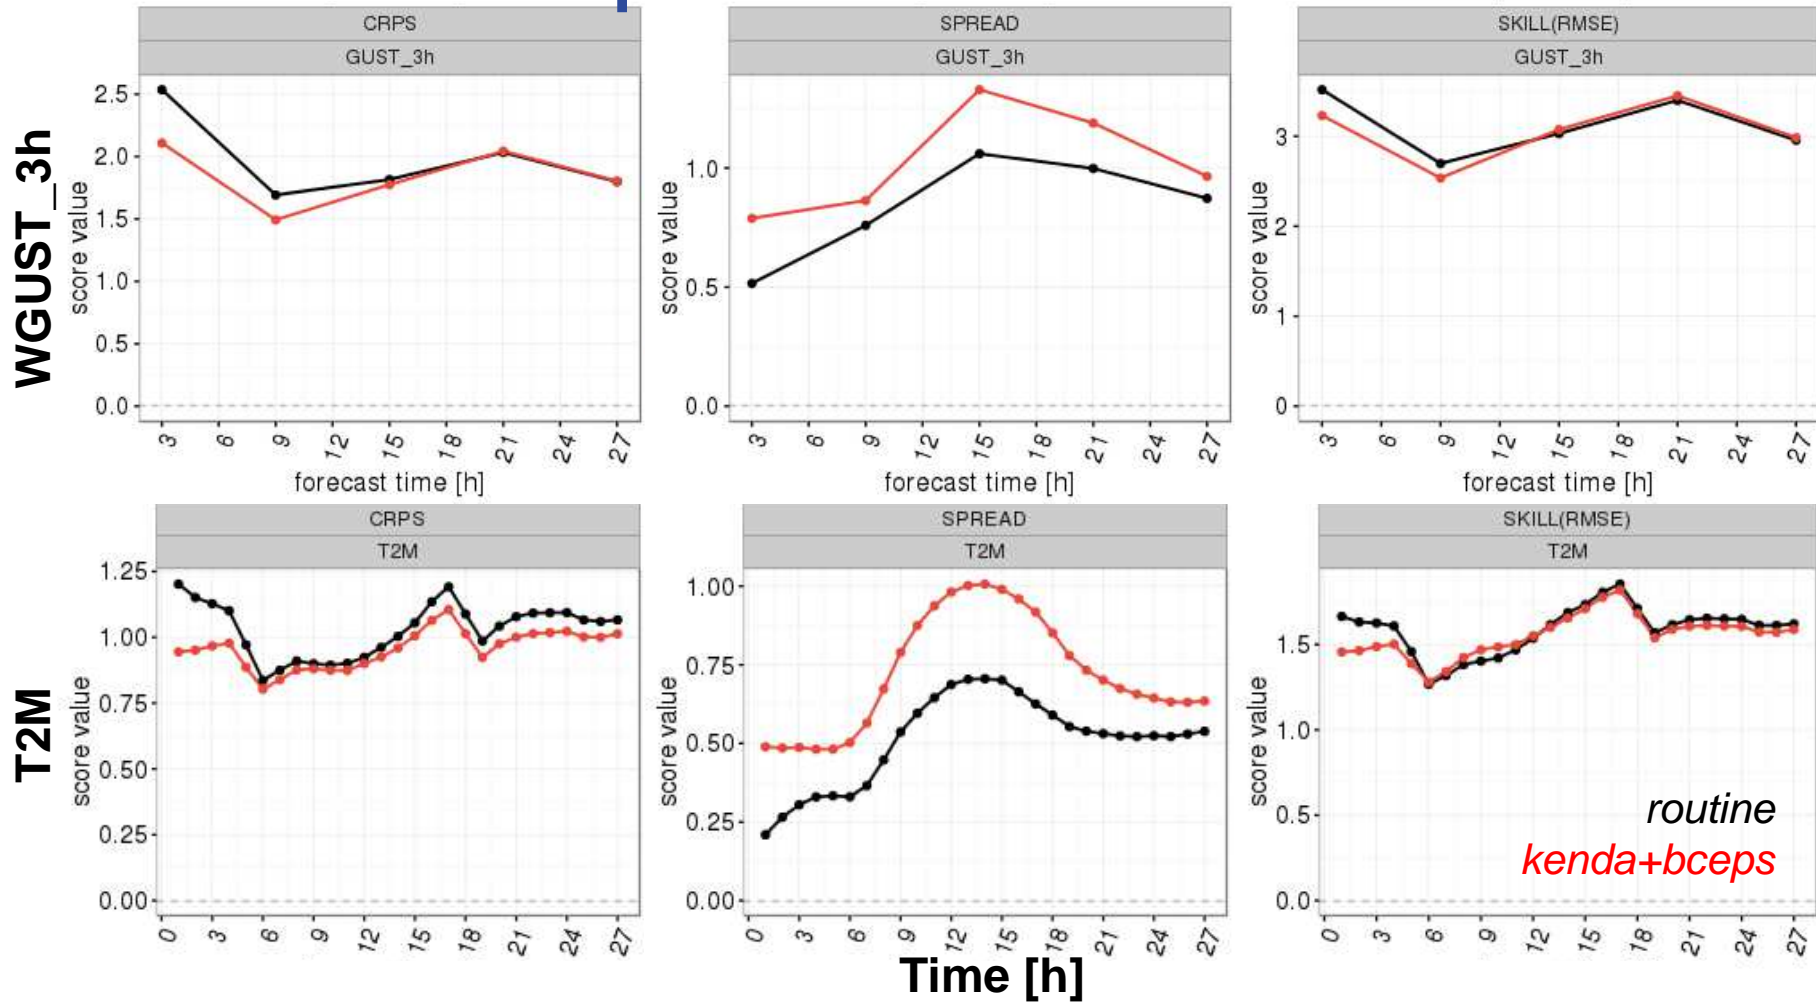

New perturbations (easier to implement with the RP)

a_stab	c_diff	radqi_ fact	radqc_ Fact	thick_ sc	rlam_ heat	entr_sc	q_crit	tur_len	tkh min	tkm min	lhn_coef
0	0.2	0.5	0.5	25000	1	0.0003	1.6	150	0.4	0.4	1
1	0.1	0.9	0.9	10000	10	0.002	4	500	0.7	0.7	0.5
	10			30000	0.1				0.2	0.2

25.08.2016 as 00 UTC run

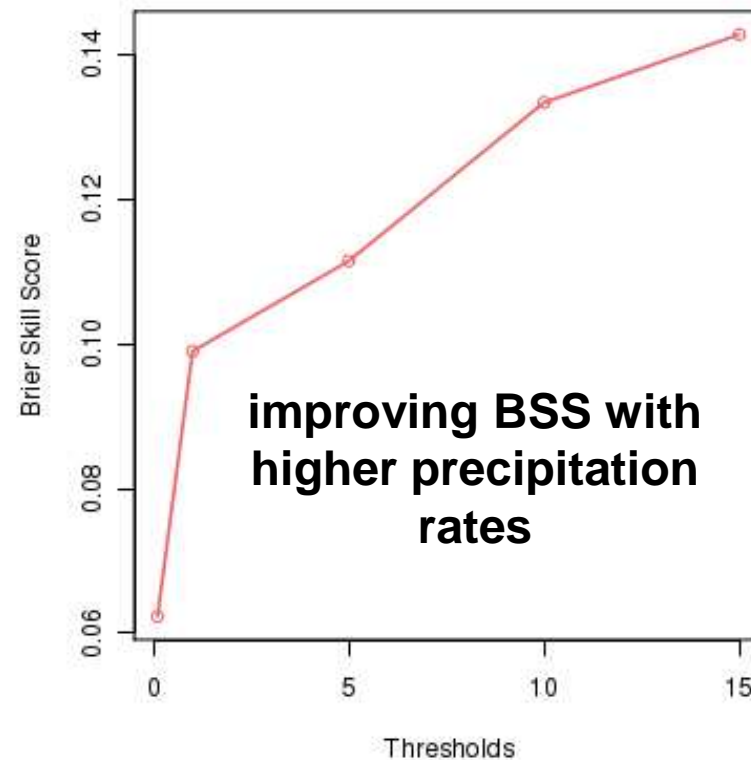

WGUST_3h routine (black) and
kenda+icon+rp (red) from 26.07.-
25.08.2016 as 00 UTC run

Results – Brier skill score

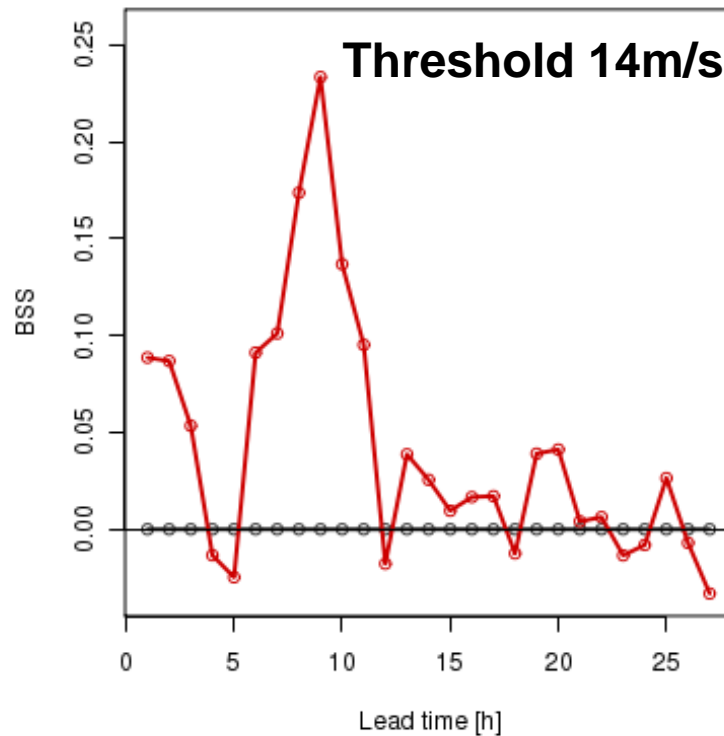

*WGUST kenda+icon+rp vs. routine
from 26.07.-25.08.2016 as 00 UTC
run*

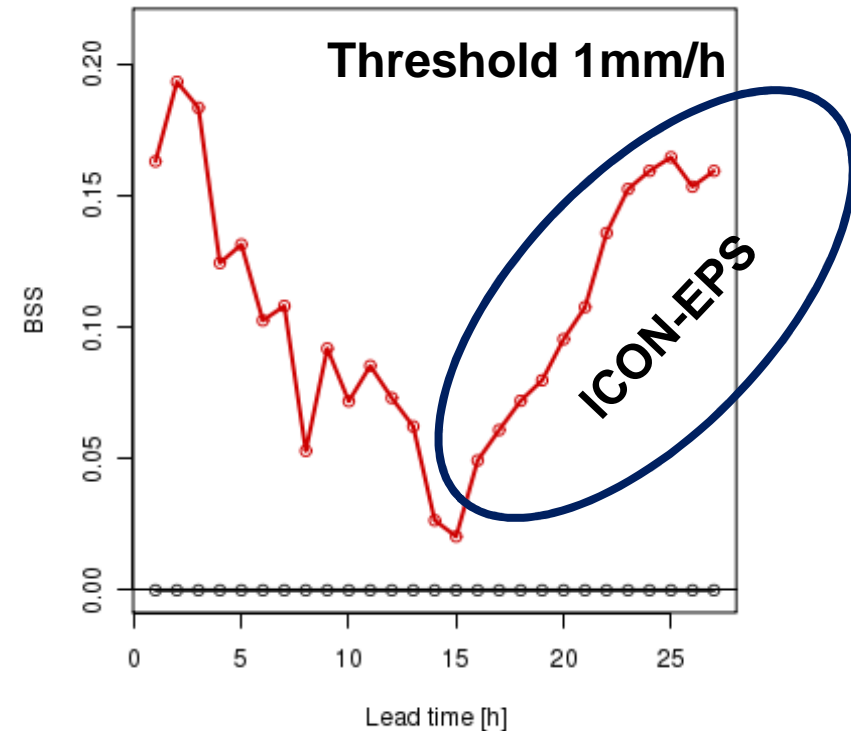

*PREC kenda+icon+rp vs. routine
from 26.07.-25.08.2016 as 00 UTC
run*

Results – Brier skill score behaviour over time

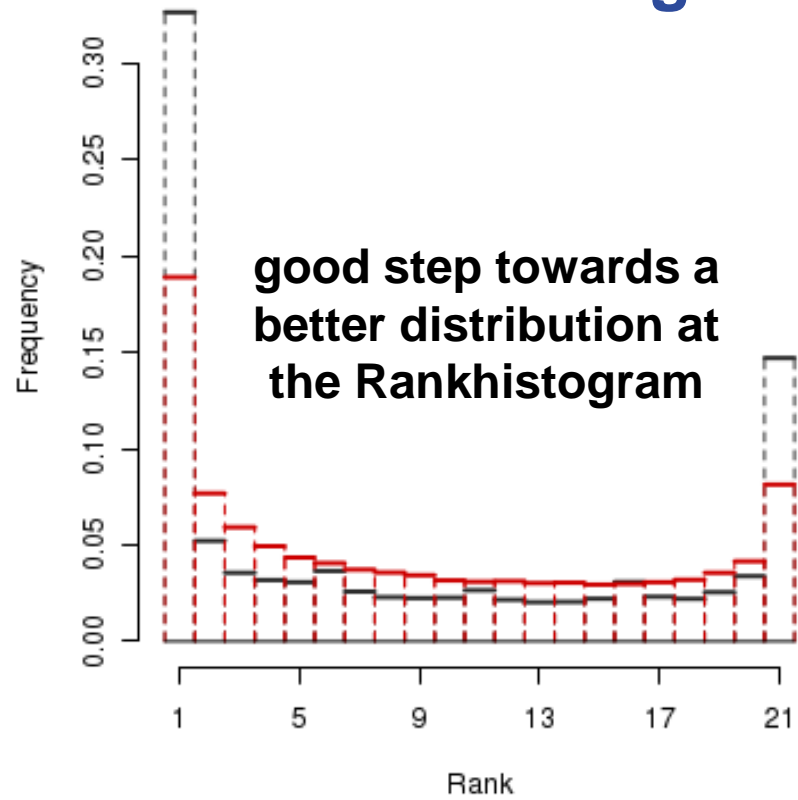

*WGUST **kenda+icon+rp** vs. routine
from 26.07.-25.08.2016 as 00 UTC
run at 14m/s threshold*

*PREC **kenda+icon+rp** vs. routine
from 26.07.-25.08.2016 as 00 UTC
run at 1mm/h threshold*

Results - Rankhistogram

WGUST routine (black) and *kenda+icon+rp* (red) from 26.07.-25.08.2016 as 00 UTC run

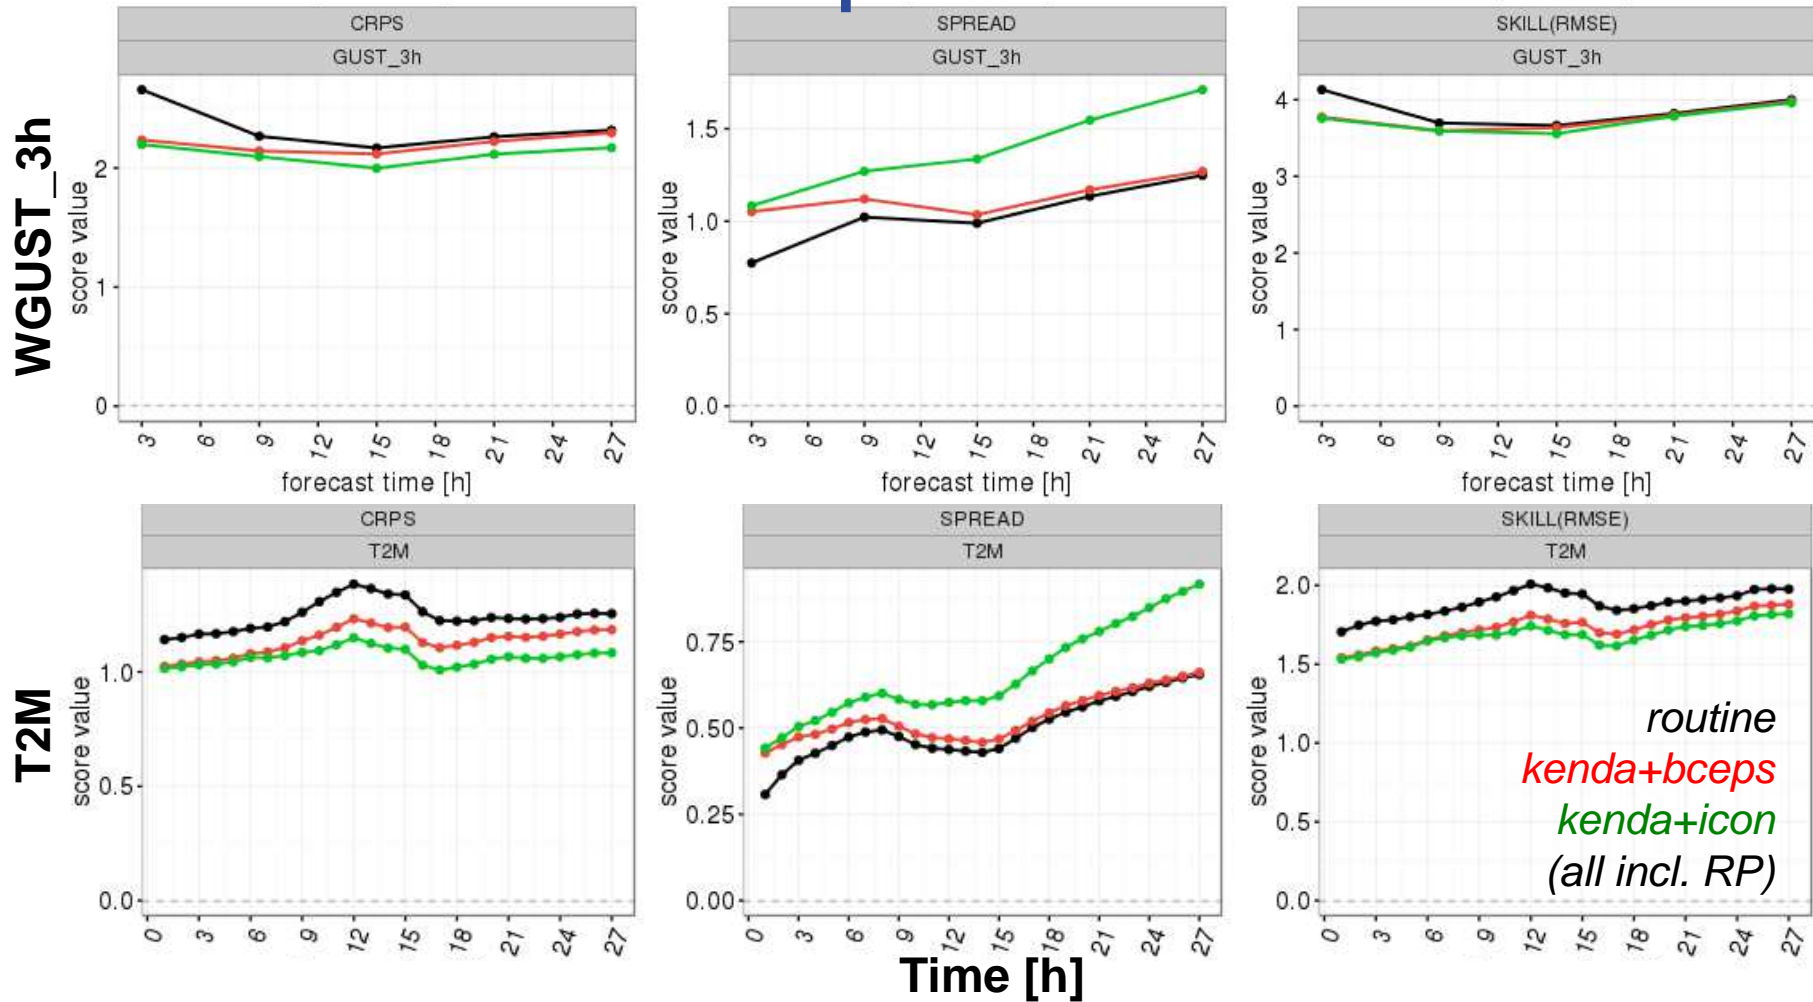

PREC routine (black) and *kenda+icon+rp* (red) from 26.07.-25.08.2016 as 00 UTC run

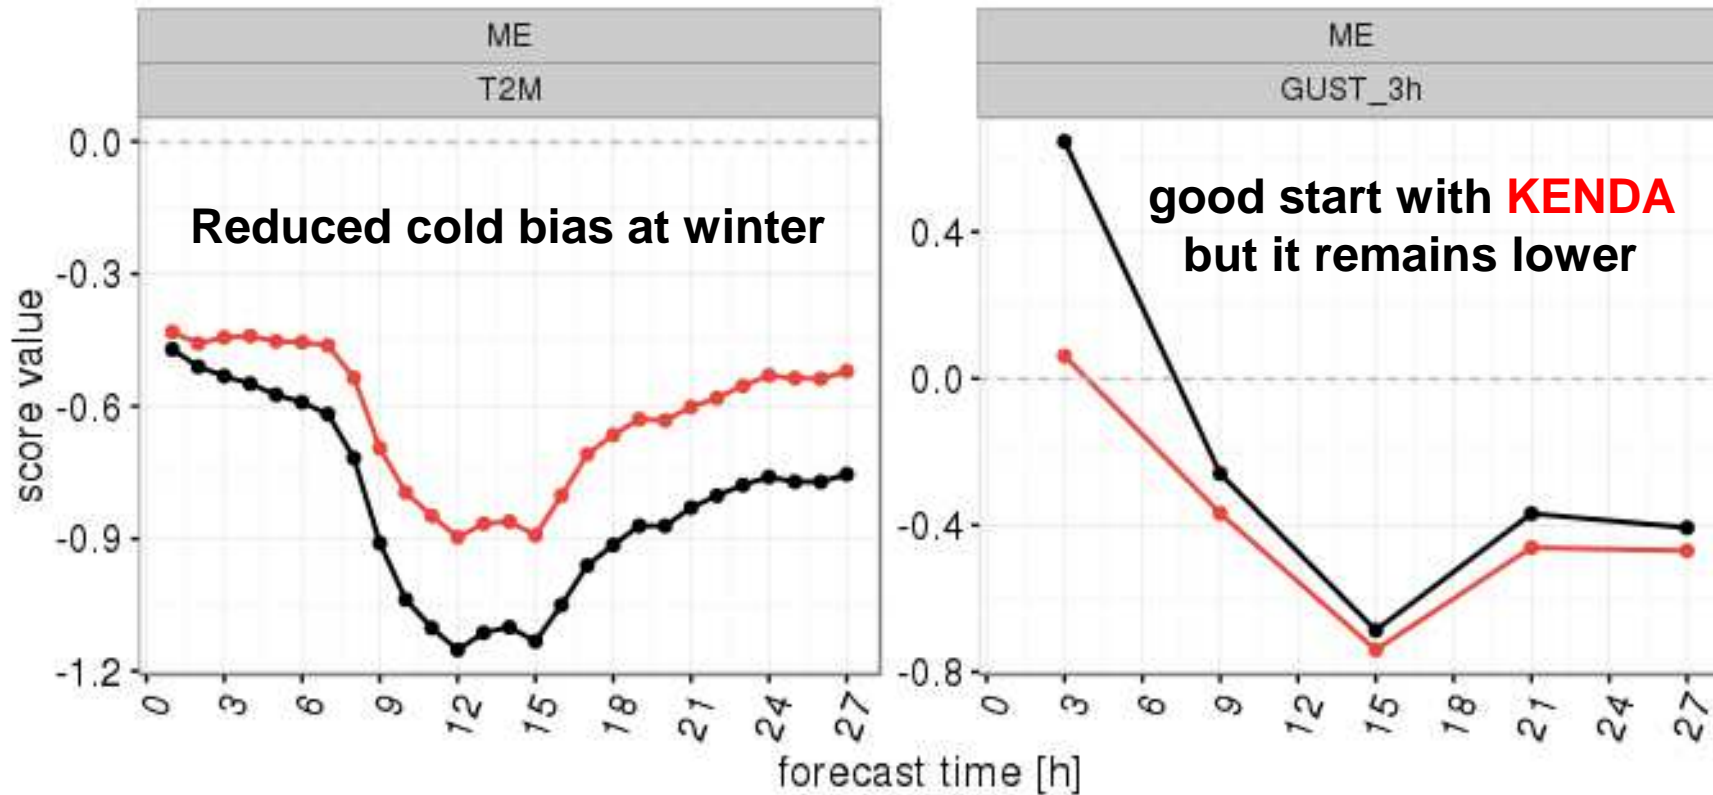

Results winter CRPS Spread and Skill

2017/01/04-22UTC - 2017/02/05-21UTC
INI: 00 UTC, DOM: ALL, STAT: ALL

Results winter bias

T2M routine+rp (black) and kenda+icon+rp (red) from 04.01.-05.02.2017 as 00 UTC run

WGUST_3h routine+rp (black) and kenda+icon+rp (red) from 04.01.-05.02.2017 as 00 UTC run

Conclusion

- Improvement in almost all scores for summer and winter
 - KENDA shows large improvement for initial conditions and the benefit remains often for the whole run
 - ICON-EPS shows positive effect at higher lead times
 - RP has a small but overall positive effect and might become of special interest for weather extremes
-
- Coming soon to routine (21.03.2017)

*T2M routine (black) and
kenda+icon+rp (red) from 26.07.-
25.08.2016 as 00 UTC run*
