August 28, 2017

This is a template of how to format an Abstract for ICCARUS (**I**CON **C**OSMO **C**LM **AR**T **U**ser **S**eminar). We accept plain text abstracts, which might contain LaTeX commands and formulas. The title, the name(s) of author(s), their affiliation(s) and the text of the abstract have to be put into our web form.

To use LaTeX commands, the best is to prepare your abstract within this template without adding any further LaTeX packages. Do not use sections, figures, fancy formatting or own macros, e.g., shortcuts for mathematical operators etc. If you can process this document successfully through LaTeX, then it will also work in our system.

Author(s) and Affiliation(s) should be specified in exactly the above way as comma-separated lists. In the `\author{}` command, use numbers in brackets after each author's name to indicate different affiliations. Authors with same affiliation should have the same number. In the `\affil{}` command, the affiliation(s) should be listed with the affiliation number in brackets first, followed by the affiliation name, a comma, the next affiliation name, and so on.

Once you are done, please **copy-and-paste** the content of the above `\title{}` command into the "Title of abstract" field of the web form. Similarly, copy-and-paste the content of the `\author{}` command into the "Authors(s)" field and the contents of the `\affil{}` command into the "Affiliation(s)" field.

Finaly, copy-and-paste all your text between `\maketitle` and `\end{document}` into the "Abstract" field.

Thank you very much and see you at ICCARUS!

The ICCARUS Organization Team
